Run on: MPsrch_pp protein - protein database search, using Smith-Waterman algorithm Mon Mar 8 14:05:53 1999; MasPar time 16.83 Seconds 739.942 Million cell updates/sec

Tabular output not generated.

Title:
Description:
Perfect Score:
Sequence: >US-08-866-354-36 (1-464) from US08866354.pep 3386 1 MILANVFCLFFFLDDTLRSL.....RARPSAALTVLSVLMLKLAL 464

Scoring table: PAM 150 Gap 11

Searched: 74019 seqs, 26840295 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot36 1:swissprot

Statistics:

Mean 48.016; Variance 67.910; scale 0.707

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PRATT D., COX G.N., MILHAUSEN M.J., BOISVENUE R.J.;

MOL. BIOCHEM. PARASITOL. 43:181-192(1990).

NOL. BIOCHEM. PARASITOL OF THE PROTEASE CORRELATES WITH BLOOD-FEEDING FUNCTION: EXPRESSION OF THE PROTEASE IN BLOOD DIGESTION.

1- DEVELOPMENTAL STAGE: AT LOW LEVEL IN THE THIRD AND FOURTH-STAGE LARVAE, AND ABUNDANT IN ADULT WORMS.

1- SIMILARITY: BELONGS TO PEPTIDASE FAMILY C1; ALSO KNOWN AS THE PAPAIN FAMILY OF THIOL PROTEASES.

1- SIMILARITY: STRONGEST, TO CATHEPSIN B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CARBOHYD

-- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-- DEVELOPMENTAL STAGE: EXPRESSED ALMOST UNIFORMLY IN

-- SIMILARITY: HIGH, WITH OTHER NOTCH-TYPE PROTEINS.

-- SIMILARITY: CONTAINS 36 EGF-LIKE DOMAINS.

-- SIMILARITY: CONTAINS 3 LIN/NOTCH REPEATS.

-- SIMILARITY: CONTAINS 6 ANK REPEATS.

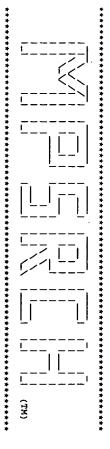

-- SIMILARITY: CONTAINS 6 ANK REPEATS.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Tabular output not generated. Run on: Mon Mar 8 15:06:23 1999; MasPar time 16.71 Seconds 785.287 Million cell updates/sec

Title:

Description: Perfect Score: Sequence:

Scoring table: PAM 150 Gap 11

Searched: 74019 seqs, 26840295 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot36 1:swissprot

Statistics: Mean 43.671; Variance 63.739; scale 0.685

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 11.495; Variance 2.154; scale 5.337

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

The sequence tag present in the cDNA between the NotI site and the
oligo-dT track (not shown) served to identify it as a clone from
the normalized adult Kidney library. cDNA Library Preparation: M.
Fatima Bonaldo, Ph.D. Clone distribution: clones will be available
through Research Genetics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          University of Iowa

                                                                         /note*"vector: pyTy3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI: The UI-R-Al library is a subtracted library derived from the UI-R-Al library. The UI-R-Al library. The UI-R-Al library consisted of a mixture of individually tagged normalized libraries constructed from rat placenta, adult lung, brain, liver, kidney, heart, spleen, ovary, and muscle. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-Al) was constructed as follows: PCR amplified cDNA inserts from a pool of approximately 3,840 UI-R-AO clones from which 3' ESTs had been derived was used as a driver in a hybridization with the UI-R-AO library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DHIOB bacteria (Life Technologies) to generate the described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806. 1946."
